

TDA 594/DIT 593 - REST Activity

“Let’s Make a Deal” is a game where contestants are presented with three doors.

- One leads to a great prize, the others lead to nothing.
- Users select one door.
- Host opens one of the other doors.
- Users can then choose to open their door or the remaining unopened door.

You have been asked to implement Let’s Make a Deal as a web service. You must support:

- Creation of games.
- User selection of a door.
 - The game will open one of the other doors.
- User opening of a door.
- Querying of the current state of the game and outcome (if complete) by user.
- Deletion of a game.

Determine the appropriate resources, verbs, and response messages.
