

# DIT635 - Structural Testing Activity

1. Draw a control-flow graph for the following program:

```
int search(string A[], int N, string what) {
    int index = 0;
    if ((N == 1) && (A[0] == what)) {
        return 0;
    } else if (N == 0) {
        return -1;
    } else if (N > 1) {
        while(index < N) {
            if (A[index] == what) {
                return index;
            } else
                index++;
        }
    }
    return -1;
}
```

2. Write tests that provide statement, branch, and basic condition coverage over the code.

# DIT635 - Loop Testing Activity

## 1. Draw the control-flow graph for the following code:

```
void Binary_search (elem key, elem* T, int size, boolean &found, int &L){  
    int bott, top, mid;  
    bott = 0;  
    top = size-1;  
    L = 0;  
  
    if(T[L] == key){  
        found = true;  
    }else{  
        found = false;  
    }  
  
    while (bott <=top && !found){  
        mid = round((top + bott) / 2);  
        if(T[mid] == key){  
            found = true;  
            L = mid ;  
        } else{  
            if (T [mid] < key ){  
                bott = mid + 1;  
            }else{  
                top = mid-1;  
            }  
        }  
    } // while  
} //binary_search
```

**2. Identify the subpaths through the loop and draw the unfolded CFG for boundary interior testing.**

**3. Write a test suite that achieves loop boundary coverage**

**(That exercises the loops:**

- Zero times**
- One time**
- Two or more times)**
